

## OEE DASHBOARD

---

## PRODUCTION DATA EVALUATION

# LINGL 4.0

## OEE-Dashboard

Example for OEE-evaluation of a reference project

With immediate effect, LINGL extends the existing operational data logging of the MBVL operating system by adding a standard **OEE evaluation!** This evaluation is based on an **OEE data acquisition** over a whole day and, in addition, over the individual shifts.

## Production data evaluation

Example for 15 minutes evaluation from a reference project

And there is a second innovation regarding the LINGL operating system: **production data evaluation every 15 minutes.**

This application permits the exportation of production data via Excel. These raw data are automatically processed into diagrams. Of course, our customers can also create their own evaluations from the raw data in Excel – and all this by using data on a quarter of an hour basis.

The first projects with the new **LINGL-OEE-Dashboard** as well as the **production data evaluation system at 15-minute intervals** have already been successfully put into operation. Even older versions of our operating system can be retrofitted accordingly.
